

To whom it may concern,I listen to XM radio on a daily basis, which I pay for, and I feel that as a subscription service the NAB should not interfere with what programming is offered. Specifically the local market programming such as traffic & weather. I live in the mountains of Colorado and as such I cannot receive the local stations with regularity (TV or radio). Therefore satellite radio is often my only means of finding out such valuable local information. Please reject NAB's petition 04-160 so that everyone may continue to have a choice of where they get their information & music.

Regards,
William Taylor
